HIIT56 — Stripe + Supabase Deliverables Checklist (CP08)

Purpose: a single checklist to set up Stripe + Supabase and hand back the exact values needed for the build.

A) Stripe (Billing) — What I need from you

Recommended integration for CP09 wiring: Stripe Checkout (hosted / prebuilt checkout form) for subscriptions. Fastest, safest, conversion-optimized; we can upgrade to custom later.

Create these Products + recurring Prices (TEST mode first):

- Member Monthly (e.g., $14.99/mo) — Price ID: price_…
- Member Annual (e.g., $149.99/yr) — Price ID: price_…
- Business Starter (e.g., $99/mo/location) — Price ID: price_…
- Business Pro (e.g., $179/mo/location) — Price ID: price_…

Keys + IDs to deliver (TEST mode):

- STRIPE_PUBLISHABLE_KEY (pk_test_…)
- STRIPE_SECRET_KEY (sk_test_…) — keep private
- Webhook signing secret (whsec_…) for our webhook endpoint
- All 4 Price IDs (price_…) listed above

Enable / decide:

- Allow promotion codes on Checkout (yes)
- Trial days: Member (suggest 7), Business (suggest 14)
- Customer Portal enabled (for cancel/update payment later)
- Tax handling: Stripe Tax on/off (start off, add later if needed)

B) Supabase (Auth + Database) — What I need from you

Create a new Supabase project and hand back these values:

- SUPABASE_URL (Project URL)
- SUPABASE_ANON_KEY (public)
- SUPABASE_SERVICE_ROLE_KEY (server only — keep private)
- Database password (keep private) OR confirm you ran supabase_schema.sql

Auth settings to configure:

- Enable Email + Password sign-in (magic links optional later)
- Set Site URL / Redirect URLs to match your Netlify domain(s)

C) Supabase setup steps (from scratch)

- Create Supabase account and verify email.
- Create new project (region US East; strong DB password).
- Project Settings → API: copy URL + anon + service role keys.
- Auth → Providers: enable Email.
- Auth → URL Configuration: set Site URL + Redirect URLs (Netlify preview + production).
- SQL Editor: run supabase_schema.sql (from Buildbook Kit).
- Verify tables: profiles, tenants, tenant_users, subscriptions, entitlements, platform_admins.

D) Paste-back format

```
STRIPE_PUBLISHABLE_KEY=
STRIPE_SECRET_KEY=
STRIPE_WEBHOOK_SIGNING_SECRET=
PRICE_ID_MEMBER_MONTHLY=
PRICE_ID_MEMBER_ANNUAL=
PRICE_ID_BIZ_STARTER=
```
